MAIL DATE

DELIVERY MODE

05/28/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/522,315	TRIBELSKY, ZAMIR	
	Examiner	Art Unit	
	REGINA YOO	1797	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 2/18/09.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 4 and 16-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,4 and 16-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

FINAL ACTION

Response to Amendment

The amendment filed on 2/18/2009 has been received and claims 1, 4 and 16-18 are pending.

Claim Objections

1. Claims 1, 4 and 16-18 are objected to because of the following informalities: in claim 1, line 9, "refection" is misspelled from "reflection". Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Claim 16 recites the limitation "the surrounding" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1, 4 and 17-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Baca (20020079271).

As to Claim 1, Baca ('271) discloses a method for ultraviolet (UV) liquid disinfection (see entire document, particularly Abstract, Figures 2-3, p. 2 [0016]-[0018] and [0027], p. 3 [0030], and p. 4 [0037]-[0038]), comprising:

providing a stream of liquid (211, 305) to be disinfected by UV-radiation, where the liquid includes contaminants (see p.2-p.3 [0026]-[0027] and p. 4 [0038]; where contaminants being microorganisms); and

disinfecting the stream of liquid by directing, within said stream of liquid to be disinfected, said UV-radiation at an angular orientation that enables the liquid to be disinfected to intrinsically serve as a flowing liquid wave guide for the UV-radiation using total internal reflection (see entire document, particularly Figures 2-3, p. 2 [0027] and p. 4 [0040]-[0042], wherein as the stream of liquid is disinfected and the UV-radiation is directed into the stream at an angular orientation, the liquid is deemed to be enabled to serve as a flowing liquid wave guide for the UV-radiation using total internal reflection).

As to Claim 4, Baca ('271) discloses that said UV-radiation is generated by a laser source (see entire document, particularly Abstract, p.3 [0030] and p. 4 [0041]).

As to Claim 17, Baca ('271) discloses that the UV radiation is utilized is UVA-, UVB- or UVC-radiation (see entire document, particularly p. 2 [0027]).

As to Claim 18, Baca ('271) discloses that the liquid is water (see Abstract).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1797

9. Claims 1, 4 and 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baca (20020079271) in view of Neuberger (5658148) or Schneider (3503804).

As to Claims 1 and 16, Baca ('271) discloses a method for ultraviolet (UV) liquid disinfection (see entire document, particularly Abstract, Figures 2-3, p. 2 [0016]-[0018] and [0027], p. 3 [0030], and p. 4 [0037]-[0038]), comprising:

providing a stream of liquid (211, 305) to be disinfected by UV-radiation, where the liquid includes contaminants (see p.2-p.3 [0026]-[0027] and p. 4 [0038]; where contaminants being microorganisms); and

disinfecting the stream of liquid by directing, within said stream of liquid to be disinfected, said UV-radiation at an angular orientation that enables the liquid to be disinfected to intrinsically serve as a flowing liquid wave guide for the UV-radiation using total internal reflection (see entire document, particularly Figures 2-3, p. 2 [0027] and p. 4 [0040]-[0042], wherein as the stream of liquid is disinfected and the UV-radiation is directed into the stream at an angular orientation, the liquid is deemed to be enabled to serve as a flowing liquid wave guide for the UV-radiation using total internal reflection).

Baca ('271) does not appear to specifically teach that the liquid stream has a refractive index greater than a refractive index of the surrounding of the stream of liquid.

As to the limitation that the liquid stream has a refractive index greater than a refractive index of the surrounding of the liquid stream so as to utilize the liquid as a

Art Unit: 1797

flowing liquid wave guide for the radiation using total internal reflection, it was known in the art at the time of invention to provide a stream of liquid which has a surrounding with lower refractive index than the liquid stream that enables the liquid to serve as a flowing liquid wave guide for the radiation using total internal reflection.

Neuberger ('148) discloses a method of delivering a liquid jet along with laser radiation in a dental application to destroy oral bacteria viruses (see Figure 5, Col. 1 lines 32-44 and 61-63 and Col. 3 lines 37-44), the method comprising:

providing a stream of liquid (via 52 to 53) (see Figure 5) wherein the liquid has a refractive index is greater than a refractive index of the surrounding (see Col. 5 lines 21-24); and

directing, within said stream of liquid (12), said laser radiation that enables the liquid to serve as a flowing liquid wave guide for the radiation using total internal reflection (see Col. 3 lines 37-44, Col. 4 lines 1-25 and Col. 5 lines 19-25),

in order to contain the laser radiation within the fluid and utilize the fluid as a flowing liquid wave guide for the radiation.

Schneider ('804) also discloses a method for photochemical treatment, the method comprising:

providing a stream of liquid (2) (see entire document, particularly Figures 1-3 and 5) wherein said liquid has a refractive index greater than a refractive index of the surrounding (see entire document, particularly Col. 2, lines 61-67 and Col. 3, lines 19-23 wherein the occurrence of total internal reflection within the liquid of the radiation indicates that the liquid possesses a higher refractive index than the surrounding); and

directing UV-radiation (see Col. 2, lines 31-32) within said stream of liquid to disinfect the liquid such that the liquid serves as a flowing liquid wave guide using total internal reflection of the UV radiation (see entire document, particularly Col. 2, lines 22-28, 61-67 and Col. 3, lines 19-27),

in order to avoid hazards due to unintentional directing of the laser ray onto living organisms or “overshooting” (see Col. 3 lines 19-24).

It would have been obvious to one of ordinary skill in this art at the time of invention to provide such a configuration wherein the liquid stream has a refractive index greater than a refractive index of the surrounding of the stream of liquid in the method of Baca in order to contain the radiation within the fluid stream so as to avoid dangers of the radiation being applied to unintended object or material when the radiation is emitted beyond the location where the radiation is first introduced into the water as shown by Neuberger or Schneider.

As to Claim 4, Baca ('271) discloses that said UV-radiation is generated by a laser source (see entire document, particularly Abstract, p.3 [0030] and p. 4 [0041]).

Schneider ('804) also discloses that said UV-radiation is generated by a laser source (see entire document, particularly Col. 2, lines 59-60 and Col. 3, lines 69-71).

As to Claim 17, Baca ('271) discloses that the UV radiation is utilized is UVA-, UVB- or UVC-radiation (see entire document, particularly p. 2 [0027]).

Art Unit: 1797

As to Claim 18, Baca ('271) discloses that the liquid is water (see Abstract).

Neuberger ('148) also discloses that the liquid is water (see Col. 4 lines 7-9).

Schneider ('804) also discloses that the liquid is water (see entire document, particularly Col. 3, line 24 and Col. 4, line 26).

Thus, Claims 1, 4 and 16-18 would have been obvious within the meaning of 35 U.S.C. 103(a) over the combined teachings of Baca ('271) and Neuberger ('148) or Schneider ('804).

Response to Arguments

10. Applicant's arguments with respect to claims 1, 4 and 16-18 have been considered but are moot in view of the new ground(s) of rejection.

11. Applicant's arguments filed 2/18/2009 have been fully considered but they are not persuasive.

Specifically, as to Applicant's argument that "Schneider is not directed to UV and all and he specifically indicates that the radiation suitable for this cleaning method can be any radiation in the range between infrared and ultraviolet", Examiner would point out that this disclosure includes the use of UV radiation and is deemed to meet the claimed limitation of directing UV radiation into the liquid stream.

Conclusion

12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to REGINA YOO whose telephone number is (571)272-6690. The examiner can normally be reached on Monday-Friday, 10:00 am - 7:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
